## Coffee Utilized Production Hawaii

## Coffee Price Hawaii

## Coffee Comments

**Coffee:** Utilized production in Hawaii for 2022-2023 totaled 25.2 million pounds (cherry basis), down 8 percent from 2021-2022. Bearing acreage was estimated at 7,000, down 3 percent from the previous year. The average yield was 3,670 pounds per acre, down 280 pounds from the previous year. The value of the crop totaled \$59.1 million, down 5 percent from the previous season, with an average annual price of \$2.35 per pound.

In Hawaii's coffee-growing regions, the impact of crop pests and diseases such as the Coffee Berry Borer and the Coffee Leaf Rust was not typical this year, contributing to a poor growing season. The Coffee Leaf Rust fungal disease caused plant leaves to fall prematurely, long-term reduced plant and berry growth. Warm temperatures and hotter-than-average conditions, followed by flooding, hit some of the growing areas and brought about an earlier harvest. Coffee growers were impacted due to the many months of drought conditions and a beetle infestation during the harvest season, which caused losses in yield and quality.

## Marketing Season

**Coffee:** October to September

**THERE'S STILL TIME. RESPOND TODAY**  
TO THE 2022 CENSUS OF AGRICULTURE

The Census of Agriculture is a complete count of U.S. farms and ranches and the people who operate them. Even small plots of land - whether rural or urban - growing fruit, vegetables or some food animals count if \$1,000 or more of such products were raised and sold, or normally would have been sold, during the Census year. The Census of Agriculture, taken only once every five years, looks at land use and ownership, operator characteristics, production practices, income and expenditures. For America's farmers and ranchers, the Census of Agriculture is their voice, their future, and their opportunity.
